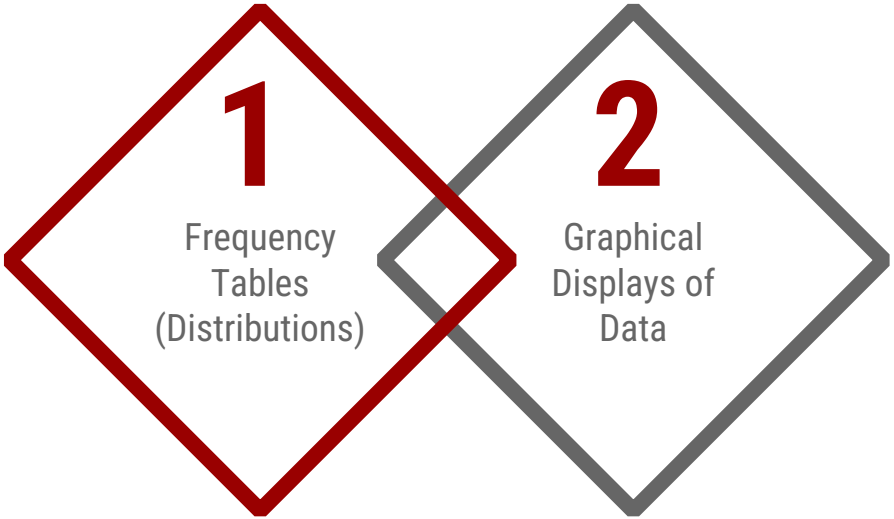
8.2 Displaying Data

Goals for the Day



1

Frequency Tables (Distributions)

Frequency Tables (Distributions)

- Summarize datasets by counting the number of observations for each category, distinct value or interval.
  - Can be used for categorical data and quantitative (numerical) data.

Count

Relative Frequency

Type of Computer	Frequency	Percent
Desktop	11	11/50 = 22%
Laptop	23	23/50 = 46%
Notebook	9	9/50 = 18%
Tablet	7	7/50 = 14%

Total = 50

Number of Pets	Frequency
1	4
2	3
3	2
4	1
5	2
6	1
7	1
8	1

Find count between 4 and 7 inclusive: 4, 5, 6, and 7

Grouped Frequency Distribution

Number of Pets	Frequency
1-2	7
3-4	3
5-6	3
7-8	2

Example 1

Construct a frequency table using the data below.

38, 33, 5, 5, 47, 29, 24, 42, 3, 18, 30, 46, 25, 44, 40, 42, 39, 44, 29, 13

Lower class limit = 0

Upper class limit = 9

Class width = $\text{Lower}_2 - \text{Lower}_1$

10 = 40 – 30

Class	Frequency	Relative Frequency
0-9	3	3/20 = 0.15
10-19	2	2/20 = 0.1
20-29	4	4/20 = 0.2
30-39	4	4/20 = 0.2
40-49	7	7/20 = 0.35
Total:	20	20/20 = 1

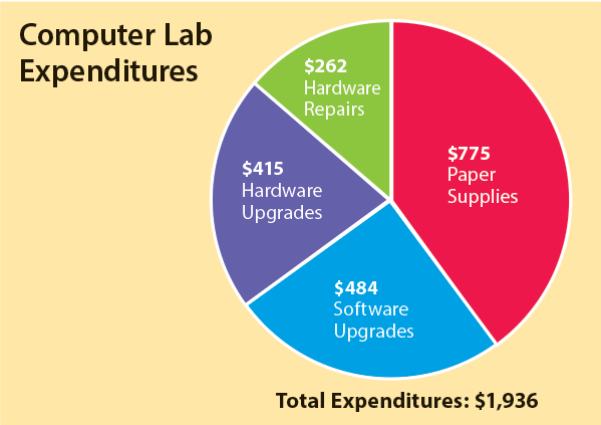
2

Graphical Displays of Data

Pie Charts

Pie Charts

- Compare parts to a whole.
- Slices represent the proportion of a category



Type of Data: Categorical

Advantages:

* Simple and common

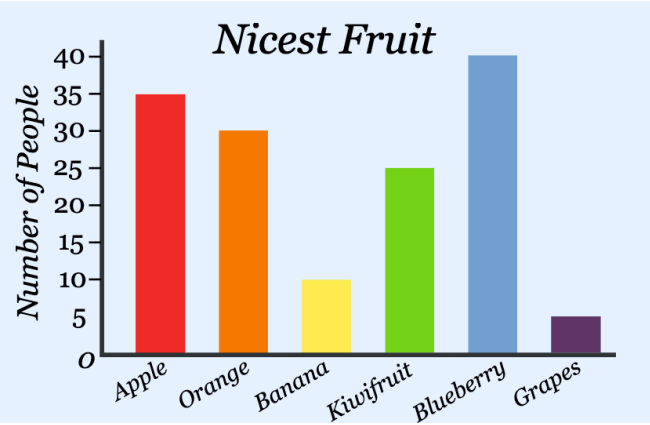
Disadvantages:

* Harder to compare area than heights
* Not useful when there are lots of categories
* Easy to be misleading if visually distorted (3D, one slice is larger) or labels are not clear)

Bar Graphs

Bar Graphs

- Height of the bar represents the amount of data in each category.
- Can be counts or relative frequencies.



Type of Data: Categorical

Advantages:

* Simple and common and easy to read

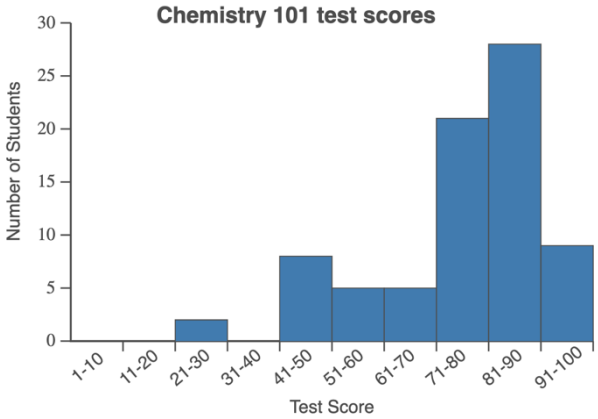
Disadvantages:

* Misleading if:
  - Bars are not equal width
  - Inconsistent vertical scale
  - Vertical scale is truncated (not start at 0)

Histograms

Histograms

- Height of the bar represents the amount of data in each class.
- Can be counts or relative frequencies.



Type of Data: Quantitative

Advantages:

* Simple
* Can show lots of data very concisely
* Shows “shape” or distribution of data

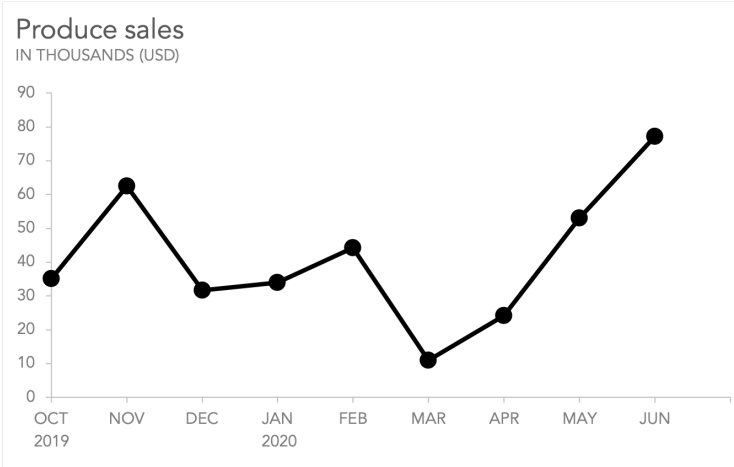
Disadvantages:

* Class width impacts the plot drastically
* Misleading if:
  - Bars are not equal width
  - Inconsistent horizontal / vertical scale
  - Vertical scale is truncated (not start at 0)

Line Graphs

Line Graphs

- Shows changes in a numerical variable over time.



Type of Data: Quantitative

Advantages:

* Shows trends over time

Disadvantages:

* Misleading if:
  - Inconsistent horizontal / vertical scale
  - Vertical scale is truncated (not start at 0)

Good Graphs

- **Good Graphs:** A clear graph should have a title, labels on the vertical and horizontal axis, and should reference the source of the data.
